NO.1 In the Construction phase, what are the two areas of focus of the Iteration Plan?

(Choose two.)

- A.development efficiency
- B.project scoping
- C.architectural risks
- D.product quality

Correct:A D

NO.2 Which two statements are true about iterations? (Choose two.)

- A.Working software is always delivered to the customer.
- B.An iterations always has a plan and evaluation criteria.
- C.An iteration is a mini project with a plan, deliverables and assessment.
- D.There are always multiple iterations in each phase.

Correct:B C

NO.3 What are three characteristics of a task? (Choose three.)

- A.is work a role performs
- B.occurs once in an iteration
- C.has granularity of a few hours to a few days
- D.usually affects only one or a small number of work products

Correct:A C D

- A.Software Development Plan
- B.Business Case
- C.Iteration Plan
- D.Risk Management Plan

Correct:C

NO.5 What is the purpose of the Project Plan?

- A.to assess the feasibility of the project
- B.to establish project staffing
- C.to describe the phases and major milestones of the project
- D.to provide a sound rationale for project funding

Correct:C

NO.6 Which two statements are true about an Executable Architecture? (Choose two.)

- A.It is a disposable prototype of the application.

- B.It is a simulation of the executing system.

Correct:C D

NO.7 Why does the risk-time profile decline more rapidly for iterative development than waterfall

development? (Choose two.)

- A.Iterative development exposes design flaws and enables resolution earlier in the lifecycle.
- B.With iterative development, customer satisfaction is maintained by early, incremental deliveries of capability.
- C.In iterative development, the software architecture can be revised in any iteration to support new features and overcome performance problems.
- D.Iterative development allows key, non-functional requirements (i.e. performance, fault tolerance and maintainability) to be addressed early in development.

Correct:A D

NO.8 How does an iterative approach help with resource and cost control?

- A.It allows the Project Manager to control allocation of resources by phase. Artifacts evolve as required by each phase and there is increased precision of cost estimates from phase to phase.
- B.It allows the Project Manager to make budgetary requests with each iteration. These requests are based on the expansion of project scope as requested by the customer.
- C.It allows iterations to be planned in advance and in detail for all phases. It helps establish costs and a profile of resource usage can be generated in advance for the entire project.
- D.It allows iterations to be de-scoped as required, at the direction of the Project Manager. It allows better management of costs as features can be moved to later iterations when resources are available.

Correct:A
